WEIGHTED AVERAGE PORTFOLIO EBITDA AND NET LEVERAGE

Weighted Average Portfolio Net Leverage (“Portfolio Net Leverage”) and Weighted Average Portfolio EBITDA (“Portfolio EBITDA”) provide clarity into the underlying capital structure of our portfolio debt investments and the likelihood that our overall portfolio will make interest payments and repay principal.

Portfolio Net Leverage reflects the net leverage of each of our portfolio company debt investments, weighted based on the current debt principal outstanding of such investments. The net leverage for each portfolio company is calculated based on our investment in the capital structure of such portfolio company, with a maximum limit of 10.0x adjusted EBITDA. This calculation excludes debt subordinate to our position within the capital structure because our exposure to interest payment and principal repayment risk is limited beyond that point. Additionally, structured credit residual interests and equity investments, for which principal repayment is not fixed, are also not included in the calculation. The calculation does not exceed 10.0x adjusted EBITDA for any individual investment because 10.0x captures the highest level of risk to us. Portfolio Net Leverage provides us with some guidance as to our exposure to the interest payment and principal repayment risk of our overall debt portfolio. We monitor our Portfolio Net Leverage on a quarterly basis.

Portfolio EBITDA is used by Prospect to supplement Portfolio Net Leverage and generally indicates a portfolio company’s ability to make interest payments and repay principal. Portfolio EBITDA is calculated using the weighted average dollar amount EBITDA of each of our portfolio company debt investments. The calculation provides us with insight into profitability and scale of the portfolio companies within our overall debt investments.

These calculations include addbacks that are typically negotiated and documented in the applicable investment documents, including but not limited to transaction costs, share-based compensation, management fees, foreign currency translation adjustments and other nonrecurring transaction expenses.

Together, Portfolio Net Leverage and Portfolio EBITDA assist us in assessing the likelihood that we will timely receive interest and principal payments. However, these calculations are not meant to substitute for an analysis of our underlying portfolio company debt investments, but to supplement such analysis.
